

REINVENTING THE MOBILE TOILET FROM CHEMICAL TO ECOLOGICAL ONE

A normal chemical toilet, ARMAL ITALY, works without chemicals in a factory in Greece.

Transferring the technology, which we developed to produce the mobile ecological toilet BIOWC, to a normal chemical toilet, we accomplished to transform the toilet into an ecological one.

It is no more necessary to use biocides.

The new ecological working way of the toilet, minimize the working and servicing cost.

It protects the environment.

No more need of continuous services.

The operator decides when the toilet needs service.
